The audit trial tools isn't available to user in the U.K., Europe, and a few

Other countries.

5.application

We have used this application to the area of this solution can be applied in mural zoho books and github.

1. first step of any data analytics project is to frame comprehendible

   problem statement.
2. Data collection and preparation.
3. Exploratory data analysis. (Exploring the data visually)
4. Model building and testing. (These models must be tested and
   Validated to ensure accuracy and reliability)

6.Conclusion

This project is useful to understand the accounting software zoho books project

For fashion haven. This project steps is little complication to understand.

7.Future scope

Continuous learning and improvement ensure that the data analytics

Project result are credible and all necessary changes to improve the

Accuracy and relevance of th e insights are taken into accounts.

Good communicating ensures that each team members knows the project

Goals and expectations and can pass on the project finding to all technical

And non- technical stakeholders.

Fostering an environment of collaboration and alignment among the

Team members and different terms sets the project on a successful track. This

Is because different team and individuals bring different skills and perspectives to

The table resulting in a more derive and complete analysis.
